

# HANSASTELA

SIDE-OPERATED. ULTRA MODERN.

## AS STYLISH AS EVER. MORE MODERN THAN EVER BEFORE: HANSASTELA WITH SIDE CONTROL

Its design has always been extraordinary, but now the HANSASTELA range is breaking with convention once again with a side-operated model. One impressive element is the one-piece cast, rectangular spout out of which flows a stream of clear water without added air. The swivel spout offers the user added convenience.

The mirror-finish chrome surface is largely protected from the water splashing off hands and as such appears even more elegant and pristine. The high base is strikingly slender – a look which is made possible by the 2.5 cartridge, which is just as high performance as it is compact. This also considerably reduces water consumption: with a flow rate of just 6 l/min, HANSASTELA saves 50% water in comparison with conventional mixers.

Restriction of the flow rate to 6 l/min and intelligent stream formation ensure optimised water consumption with full comfort.

Extremely quiet. Fitting complies with the strict conditions under noise protection class 1.

Water circuit without nickel coating.<sup>1</sup>  
For unimpeded drinking pleasure.

The right product for the modular and design-oriented concealed installation system HANSAMATRIX.

Precise operability thanks to limited swivel radius (150°) of the spout.

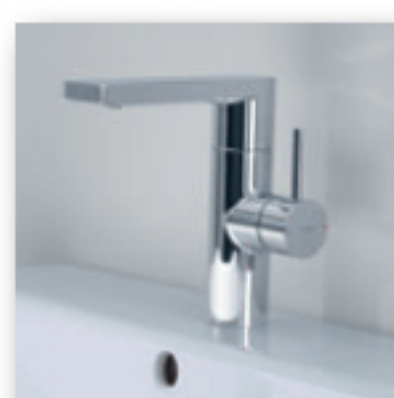

Laminar stream. A uniquely shaped stream of water without added air.

<sup>1</sup> Surfaces in contact with drinking water do not have nickel coating.

The separately available square X-Plate from the X/O range is one design option for emphasising the rectangular and angular aspects of the HANSASTELA in rather puristic and clear bathroom architectures.
